DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to an apparatus for use in balancing a disk pack, classified in class 29, subclass 737.
- II. Claims 8-28, drawn to a method of making a balanced disk pack, classified in class 29, subclass 603.03.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed in Group I can be used to practice another and materially different process such as using a latching assembly including compressible latch rigidly coupled to a latch gap zone to lock the mechanical counterbalance by means of compression and expansion of the compressible latch portion. Furthermore, the process as claimed in Group (II) can be practiced by another materially different apparatus such as one with analyzing means.

3. In case the applicant elects Group II (claims 8-28), further restriction to one of the following inventions is required under 35 U.S.C. 121:

- (a) Claims 8-18, drawn to a method of making a balanced disk pack, classified in class 29, subclass 603.03.

Art Unit: 3729

- (b) Claims 19-28, drawn to an apparatus for making a balanced disk pack, classified in class 29, subclass 737.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions of Group (a) and Group (b) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed in Group (a) can be practiced by another materially different apparatus such as one with analyzing means, for example a computer to analyze a balancing operation. Furthermore, the apparatus as claimed in Group (b) can be used to practice another and materially different process such as fitting mechanical counterbalance into open screw hole prior to locking it against a member of a locking plate collection.
5. A telephone call was made to Gregory Scott Smith on 7-1-2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
